

PETER BARTSCH

(847) 636-2708 | peter@peterbartsch.com | portfolio: petebartsch.com | <http://linkedin.com/in/peterbartsch>

Staff Product Designer · UX systems thinker. Led UX for a \$3.8B subscription platform at Deere across web, mobile, and embedded equipment systems (500K users, 12 languages). Built design org 1→10 at FourKites scaling a real-time IoT asset-tracking platform processing 10M+ daily events (\$3M→\$100M ARR, \$1B+ valuation). Now founder of Thios — running an AI-native workflow (Claude, Cursor, Figma Make) to ship a CAD-driven configurator, dev-grade design system with its own Claude Skill, and physical hardware.

PROFESSIONAL EXPERIENCE

THIOS (thios.co) | Founder & Lead Designer | Aug 2024 - Present

Open-source modular structures running on a 5-surface design system where I'm the only designer and agents are the engineering team, every surface (dashboard/configurator, docs, marketing, mobile, CAD) ships from one source of truth.

- **Shipped a complete product ecosystem solo in 18 months** across every surface — dashboard/configurator, docs, marketing sites, mobile, and physical hardware (6 sphere variants with CAD models, prototype, first revenue)
- **Designed and built parametric OnShape CAD as the single source of truth** driving BOM and the 3D configurator at thios.co/configurator — customers manipulate real geometry with full configuration state (valid/invalid combinations, loading, error, empty, BOM hand-off), not marketing renders
- **Built a 5-surface, dev-grade design system**, published its first Claude Skill (audit-design-token-drift) that catches design-token drift across canonical surfaces with file:line citations. Design system as dev tooling, not a Figma library nobody opens — <https://www.thios.co/design-system-architecture.html>
- **Operate an end-to-end AI-native workflow** (Claude, Cursor, Figma Make, Adobe Firefly, Obsidian) from research and IA through dev-ready handoff — agents implement while I own systems thinking, journey mapping, state coverage, and edge cases

JOHN DEERE | Senior Lead UX; Digital Customer Experience | Aug 2020 - Jul 2024

Embedded with product teams to modernize 20-year-old systems and drive subscription revenue across connected agricultural equipment. Proving enterprise design can move fast with the right frameworks.

- **Redesigned the license management system** for connected ag equipment (Automation/AI services) serving 500K+ users across 12 languages — mapped flows, license states, and edge cases (expired/renewed/transferred/dealer-managed); +34% authenticated engagement, -16% support tickets, enabled \$3.8B in subscription revenue
- **Built a unified account and navigation framework** deployed across 8 product lines spanning web, mobile, and embedded equipment systems — consolidated fragmented experiences into a single customer view; +28% dealer support efficiency
- **Core contributor to the enterprise design system in Figma** spanning 6 brands and 40+ product teams globally — produced dev-ready handoffs (tokens, prop specs, full state coverage) that reduced design-to-development time 45% on components that actually shipped

FOURKITES | Lead UX / Manager | Jan 2017 - Jan 2020

Employee #28 during hypergrowth, \$3M → \$100M ARR (\$1B+ valuation). Built the design function from scratch — founding designer to a 10-person global team.

- **Designed flagship IoT asset-tracking platform 0→1** — real-time supply chain control tower (web) and mobile apps processing 10M+ daily GPS/telematics events for 30+ Fortune 2000 customers (Anheuser-Busch, Georgia-Pacific, Tyson); high-density dashboards with map, list, and timeline views became the primary driver of 3x customer expansion

PETER BARTSCH

(847) 636-2708 | peter@peterbartsch.com | portfolio: petebartsch.com | <http://linkedin.com/in/peterbartsch>

- **Led predictive analytics dashboards** (data viz, anomaly states, alerting workflows) that identified shipment delays 6–12 hours earlier than competitors; +41% retention, +\$120K avg ACV
- **Scaled the design org across Chicago and Chennai** embedded in engineering sprint cadence; established component library, design ops, and hiring framework — –65% design inconsistencies while maintaining startup velocity

MAVENWAVE PARTNERS | Senior UX + Agile Lead (Consultant) | Jan 2014 - Jan 2017

Led digital product design for Fortune 500 healthcare and pharma clients. Fast iteration in slow-moving industries.

- **Designed 6 internal portals for AbbVie** supporting 200K+ users across clinical trials and patient support programs — improved medication adherence tracking, –12% hospital readmissions
- Rebuilt OptumRx pharmacy formulary platform processing 1.4B prescriptions annually — created the company's first patient-facing product; –15% fulfillment errors via improved drug-interaction warnings
- **Established Lean UX** and Agile/sprint-cadence practices across client engagements while mentoring junior designers and leading cross-functional design sprints

NOKIA / HERE MAPS | Product Marketing Manager, HERE Traffic | Aug 2012 - Jan 2014

Product work across real-time vehicle-telematics data products and an open-source distributed computing project (DEMPSY, a Hadoop alternative).

- **Designed GPS probe visualizations** and a probe viewer app for real-time connected-vehicle telematics analysis
- **Wireframed and led project delivery for HERE Real-Time Traffic and Trapster app** integrations across connected-vehicle data products
- **Owned go-to-market for DEMPSY**, an open-source distributed computing platform — early exposure to designing for developer audiences

GOGO INFLIGHT INTERNET | Product Manager - Signature Services | Apr 2008 - Aug 2012

Aerospace connectivity: launched in-flight internet across major US airlines — onboard hardware + Air-to-Ground RF network. \$700M go-to-market.

- **Owned airborne products and onboard hardware UX** for major US airlines, including initial rollout testing across fleets
- **Authored FAA-approved documentation** for business and commercial fleet Air-to-Ground (ATG) RF connectivity systems
- **Designed an in-flight flight tracker 0→1** (real-time positional data + passenger UX) that drove successful sponsorship deals

SKILLS

UX Systems: User flows · journey mapping · IA · interaction design · state management · edge-case coverage (idle/loading/success/error/empty) · information density · dashboards · enterprise design systems · design tokens · accessibility (WCAG 2.1)

Research & Methods: User interviews · usability testing · design sprints · Lean UX · Agile/Scrum sprint cadence · PRD/RFC participation

AI-Native Workflow: Claude (incl. authoring custom Claude Skills) · Cursor · Figma Make · Adobe Firefly · Midjourney · Obsidian as knowledge base

Tools: Figma · OnShape CAD · Blender 3D · HTML/CSS · Adobe Creative Suite

EDUCATION: **Arizona State University** | Bachelor of Arts, Humanities and Architectural Theory

COMMUNITY: **Member, Board of Directors** | How Weird Street Faire 501(c)(3) San Francisco Street Fair 2000 - 2024
