

GLOBAL TRACKING

FourKites redefines supply chain management for global organizations.

The Ask:

Multi-modal logistic tracking is complicated. Truck loads have different realities than containers on ships at sea, as do rail cars. Each reality brings different data points. Feedback was we were not showing the right data, and not enough data on the screens. I was dispatched to solve the problem.

My Role:

Lead UX Architect

Approach:

On-site User Interviews with actual users, in their actual workspaces to best understand the use case, iterate prototypes with their feedback.
